Allowance of Application # 09/819,773

1. The following communication is in response to applicant's amendment received 13 June 2005.

Reasons for Allowance

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the information described in the related prior art, specifically the article authored by Herrell et al., entitled *Modeling of Power Distribution Systems for High-Performance Microprocessors*, and U.S. Patents 5,737,202 and 6,385,565, issued to Shimamori and Anderson respectively. The improvement comprises an apparatus and method for modeling a power system of a microprocessor chip, wherein the model comprises a plurality of bump and grid models and a plurality of section models that receive a plurality of outputs from the plurality of bump and grid models, wherein the plurality of section models further comprises a load model, and wherein a plurality of channel models interconnect the plurality of section models. This patentable distinction is included in each of the independent claims nos. 1, 14, 15, 23, 31 and 32. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <method for modeling a power system of a microprocessor chip> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 6, line 5 through page 11, line 21, and Figures 1-9c. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
